DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 49-81, drawn to an apparatus for analysis of a sample on a solid phase surface, classified in class 422, subclass 50.
- II. Claims 82-114, drawn to an apparatus for analysis of a sample on a solid phase, classified in class 422, subclass 68.1.
- III. Claims 115-147, drawn to an apparatus for analysis of a sample on a solid phase surface, classified in class 422, subclass 82.05.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are unrelated to each other and are patentably distinct and independent inventions. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the inventions are not disclosed as capable of use together and they have different modes of operation. Invention II requires that light be delivered to the sample after passing through a surface when a solid phase surface is present, whereas Inventions I and III do not. Invention III requires that the light be delivered to the sample without first passing through a solid phase surface when the solid phase surface is present, whereas Inventions I and II do not.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for one group is different than for the others, restriction for examination purposes as indicated is proper.
